Course content

Why Attend

Organizations face increasing risks from cyber threats, operational disruptions, natural disasters, and infrastructure failures. A well-designed Business Continuity and Disaster Recovery (BC/DR) architecture enables organizations to maintain critical operations, protect key assets, and recover rapidly from disruptive events. This course provides participants with practical knowledge for designing, implementing, managing, and continuously improving Business Continuity and Disaster Recovery frameworks aligned with international best practices.

Course Methodology

- The course combines instructor-led presentations, practical workshops, case studies, Business Impact Analysis (BIA) exercises, crisis simulations, group discussions, scenario-based learning, and real-world BC/DR planning activities.

Course Objectives

- Understand the principles of Business Continuity Planning (BCP) and Disaster Recovery (DR)
- Design an effective Business Continuity Management (BCM) architecture
- Conduct Business Impact Analysis and organizational risk assessments
- Develop crisis management, emergency response, and recovery strategies
- Integrate information security considerations into BC/DR planning
- Validate, test, maintain, and continually improve continuity plans

Target Audience

- Business continuity managers
- Disaster recovery coordinators
- IT managers and infrastructure professionals
- Risk management professionals

Course outline

Detailed course outline

Day-by-day outline for Business Continuity & Disaster Recovery Architecture.

Day 1 - Business Continuity Planning Fundamentals

- Understanding the principles and objectives of Business Continuity Planning
- Exploring the relationship between business continuity, crisis management, and organizational resilience
- Identifying operational, technological, environmental, and strategic risks
- Applying risk identification and vulnerability assessment methodologies
- Evaluating organizational resilience using structured risk assessment techniques
- Practical case study: Assessing business continuity risks and organizational vulnerabilities

Day 2 - Designing Business Continuity Architecture

- Establishing governance structures and accountability for risk mitigation
- Conducting organizational readiness assessments using structured evaluation tools
- Developing emergency response and incident management plans
- Designing comprehensive business continuity frameworks covering critical business functions
- Developing departmental continuity plans, contingency arrangements, and evacuation procedures
- Establishing crisis management teams, emergency operations centers, and communication strategies

Course outline

Day-by-day outline for Business Continuity & Disaster Recovery Architecture.

Day 3 - Technology Resilience and Security within Business Continuity

- Integrating information security requirements into Business Continuity and Disaster Recovery planning
- Developing continuity policies, operational procedures, and governance documentation
- Designing technology resilience frameworks that support critical business operations
- Developing comprehensive Business Continuity blueprints aligned with organizational objectives
- Validating continuity architecture through periodic reviews and reassessments
- Practical case study: Strengthening technology resilience within business continuity programs

Day 4 - Crisis Leadership and Business Continuity Operations

- Managing command, control, and decision-making during crisis situations
- Developing effective crisis communication strategies for internal and external stakeholders
- Identifying early warning indicators and escalating potential disruptions proactively
- Coordinating major incident response through structured crisis management exercises
- Managing workforce wellbeing, morale, and organizational resilience during prolonged disruptions
- Practical simulation: Coordinating organizational response to a major business disruption

Course outline

Detailed course outline

Day-by-day outline for Business Continuity & Disaster Recovery Architecture.

Day 5 - Recovery, Validation, and Continuous Improvement

- Planning the transition from emergency response to normal business operations
- Validating the effectiveness of continuity strategies and recovery procedures
- Conducting post-incident reviews and organizational lessons learned sessions
- Preparing management reports evaluating continuity performance and organizational resilience
- Prioritizing corrective actions, resource allocation, and future improvement initiatives
- Developing governance processes for continuous review and enhancement of Business Continuity and Disaster Recovery programs
